

AI Agent Workshop - Preparation

Python

First, need to check if you have installed **Python 3**

In Terminal run

None

```
python3 --version
```

You should see the response 3...

None

```
Python 3.13.7
```

If not, you need to install Python 3 using the CLI or from the [Download Python](#)

CLI

If you haven't installed **Homebrew**, [Install Homebrew](#)

None

```
brew install python
```

Relaunch Terminal and try again to check the Python 3 version

Code Editor

I will use [Cursor](#)

Ollama

Install [Ollama](#)

The full list of available LLM models can be found [here](#)

For this workshop, we will use **qwen2.5:7b**

After installing Ollama, we need to move to the Terminal and install 2 models, **LLM** and **Embedding** (don't worry if you are not familiar with this, I will talk about this on the workshop)

1.

None

```
ollama pull qwen2.5:7b
```

2.

None

```
ollama pull mxbai-embed-large
```

After run

None

```
ollama list
```

You should see

None

NAME	ID	SIZE	MODIFIED
qwen2.5:7b	845dbda0ea48	4.7 GB	7 hours ago
mxbai-embed-large:latest	468836162de7	669 MB	4 days ago
